

# Index

## A

Adverse pressure gradient, 41  
Algebraic model, 51, 57  
Algebraic stress model, 87  
Axisymmetric jets, 70

## B

Back scatter, 96  
Backward facing step, 42, 88  
Bernoulli's equation, 11  
Black box approach, 107  
Boundary layer, 32–34, 41, 44  
Boundary-layer equations, 110  
Boundary-layer thickness, 31, 32  
Boussinesq, 49, 50, 56, 109  
Buffer layer, 25  
Buoyancy, 31, 35, 37, 73  
Buoyancy production of turbulence, 73, 75

## C

Central difference scheme, 103  
Centrifugal, 88  
CFD, 24  
Characteristic width, 37  
Closed set, 47  
Closure problem, 43, 48  
Compact heat exchangers, 105  
Complete models, 59, 62  
Computational cost, 75  
Computational fluid dynamics, 24  
Conjugate heat transfer, 72, 107  
Convection, 34  
Convective heat transfer, 1, 14, 15, 107, 115  
Convective heat transfer coefficient, 14  
Coriolis, 88  
Critical Reynolds number, 22  
Curvature, 64, 70, 76

## D

Damping function, 78  
Damping functions, 66, 67, 70, 78  
Density, 2, 10  
DES, 111  
Detached eddy simulation, 97  
Direct numerical simulation, 24  
Displacement thickness, 32  
Dissipation, 19, 54, 59–66, 68–70, 75, 77  
Dissipation of Reynolds stress, 83  
Dissipation of turbulence kinetic energy, 60, 61, 72, 76  
Dissipation scales, 92, 93  
DNS, 25, 27, 67, 91–94, 97, 98, 102–104  
Dynamic SGS model, 96

## E

Eddy, 50–52, 55  
Eddy turn over time, 92  
Eddy viscosity, 35, 49–53, 55, 61, 66, 68, 71, 72, 75–77  
Energy, 1, 11–14  
Enhanced wall-functions, 65  
Ensemble average, 44  
Entrainment, 37  
Equation for Reynolds stress tensor, 81, 84  
Equation for turbulent scalar flux, 84  
Ergodynamic assumption, 45  
Euler's equations, 11  
Eulerian, 1  
Eulerian approach, 4  
Explicit, 119

## F

Far wakes, 70  
Favourable pressure gradient, 38, 41  
Film cooling, 113

**F** (*cont.*)

Filter function, 94  
 Filtered Navier–Stokes equations, 94  
 Fire services, 75  
 Fluid acceleration, 9  
 Forced convection, 14  
 Free (or natural) convection, 14  
 Free-shear flows, 22, 23, 28  
 Free-streams, 62, 85  
 Friction factor, 38, 39  
 Friction temperature, 100  
 Friction velocity, 26, 27  
 Frozen LES, 112  
 Fully developed, 38, 39  
 Fully developed flow, 5, 18  
 Fully developed region, 17  
 Fully turbulent layer, 24

**G**

Gradient diffusion assumption, 82  
 Grashof number, 22, 109

**H**

Heat exchangers, 105, 107  
 Heat flux, 2, 13, 14  
 Heat transfer, 87, 88  
 Homogeneous turbulence, 24, 44  
 Human throat, 111  
 Hydrodynamic boundary layer thickness, 14  
 Hydrodynamic stability, 22, 29

**I**

Impinging jets, 70  
 Implicit, 119  
 Incomplete models, 50, 53, 57  
 Inertial range, 96  
 Inertial subrange, 21  
 Inflow condition, 107, 112  
 Initial conditions, 92, 102  
 Inlet, 13, 62, 84, 106, 109  
 Inner sub-layer, 65  
 Integral approach, 5  
 Interface, 3, 13  
 Intermittency, 21  
 Intermittent region, 51  
 Irrotational, 6  
 Isotropic, 32  
 Isotropic turbulence, 24

**J**

Jet, 35, 37

**K**

Karman vortex street, 17  
 Kinetic energy, 19, 20  
 Kolmogorov, 67, 70  
 Kolmogorov scale, 20, 21, 25  
 $k$ - $\varepsilon$  model, 56, 59, 60, 62, 64, 66–72, 74, 76  
 $k$ - $\varepsilon$  model constants, 61  
 $k$ - $\varepsilon$ - $\gamma$ , 76, 78  
 $k$ - $\omega$  model, 56, 69, 70  
 $k$ - $\omega$  model constants, 70

**L**

Lagrangian, 1  
 Lagrangian approach, 4  
 Laplace's equation, 7  
 Large eddy simulation, 25  
 LES, 25, 41, 42, 88, 89, 92–94, 96–104, 107, 110, 115  
 Linear momentum, 10  
 Linear stability theory, 23  
 Low-Re models, 65  
 Low-Re version, 62, 66, 85

**M**

Mach number, 2, 3  
 Mass Conservation, 9  
 Mean temperature, 18, 27  
 Mean temperature in wall coordinates, 27  
 Mesh, 94–96, 98–100, 103  
 Meso heat exchangers, 105  
 Micro heat exchangers, 105  
 Mixing layer, 35, 36  
 Mixing length, 50–52  
 Mixing length models, 50  
 Model constants, 63, 70–72  
 Modeled transport equation, 59, 61, 62, 75  
 Molecular diffusion of scalar, 47  
 Momentum thickness, 32  
 Moody's diagram, 40  
 Multiple reference frames, 107

**N**

Navier–Stokes, 11, 16, 21, 24, 25  
 Navier–Stokes operator, 60, 82  
 Near wall turbulence, 67, 78  
 Newtonian fluids, 3, 4  
 No slip condition, 12–14, 62, 65, 105  
 No temperature jump condition, 13  
 Non-equilibrium wall functions, 64  
 Non-newtonian fluids, 4  
 Normal stresses, 8  
 Nusselt number, 15, 18

**O**

One equation, 57  
 One equation model, 53–55  
 One equation model, 50  
 Open boundary conditions, 102  
 Orr–Sommerfeld equations, 22  
 Oscillatory flow, 67  
 Outer layer, 65  
 Outlet, 13, 62, 85, 106, 108, 112  
 Overall mass conservation, 102

**P**

Particle tracking, 109, 112  
 Passive scalar, 35  
 Pathline, 4  
 Phenomenological, 59  
 Pin fin heat sink, 105, 106  
 Plume, 25, 35, 37  
 Point of separation, 41  
 Poisson equation, 95, 101  
 Prandtl number, 27, 28  
 Pressure, 8, 9  
 Pressure gradient, 34, 38, 40, 42  
 Pressure strain, 82, 83, 88  
 Pressure–velocity correlation, 54

**Q**

Quiescent ambient, 76

**R**

RANS, 43, 46, 48  
 RANS computations, 112  
 RANS models, 113  
 Realizable  $k-\varepsilon$  model, 68  
 Reattachment, 41  
 Reynolds number, 20, 22, 23, 26  
 Reynolds shear stress, 34  
 Reynolds stress tensor, 81–84, 86, 87  
 Reynolds stress transport, 86, 88  
 Reynolds-averaged Navier–Stokes, 41, 47  
 Reynolds-averaging, 44, 48  
 RNG  $k-\varepsilon$  model, 68, 69, 114  
 Rotating flow, 105, 107  
 Rotation, 6  
 Runge–Kutta method, 103, 119

**S**

Scalar flux transport model, 84, 88  
 Scalar transport, 47, 48, 127  
 Scale similarity model, 97  
 Scale similarity SGS model, 97  
 Second order moment closure, 77  
 Separated flows, 40  
 Separation, 41, 42

SGS model, 94–97  
 SGS stress, 94–97  
 Shear production of  $k$ , 61  
 Shear stresses, 8  
 Skin friction coefficient, 64, 77  
 Sliding grid, 107  
 Smagorinsky, 95, 96, 103, 104, 112, 115  
 Spalart and Allmaras model, 55, 111  
 Spatial average, 44  
 Spatial discretization, 103  
 Specific dissipation rate, 69, 70  
 Speed of sound, 3  
 SSG pressure strain, 82  
 SST  $k-\omega$ , 72  
 Stationary turbulence, 24, 44  
 Stirred vessel, 105, 107, 108, 115  
 Strain, 7  
 Streakline, 4  
 Stream function, 4–6  
 Stream tube, 5  
 Streamline, 4, 5, 11, 16  
 Streamline curvature, 77, 78  
 Strouhal number, 17  
 Subgrid scale, 25, 91, 94, 97, 104  
 Subgrid scale eddy viscosity, 96  
 Subgrid scale model, 91, 94, 103  
 Super layer, 32  
 Surface forces, 7  
 Surface roughness, 40  
 Surface tension, 3  
 Symmetry conditions, 102, 106, 109, 110  
 Symmetry plane, 62, 87

**T**

Temperature fluctuations, 110  
 Temperature gradient, 2, 15  
 Temporal discretization, 103  
 Thermal boundary layer, 32, 35  
 Thermal boundary layer thickness, 14  
 Thermal conductivity, 2, 3  
 Thermal sublayer, 27  
 Thick axisymmetric  
   boundary-layers, 76  
 Thin boundary-layer, 95, 100, 101  
 Thin-shear layer, 51  
 Time average, 44, 46  
 Time averaged Navier–Stokes  
   equations, 108  
 Timeline, 4  
 Tollmein–Schlichting waves, 23  
 Tollmien–Schlichting, 31  
 Transitional Reynolds number, 22  
 Transport equation for turbulence kinetic  
   energy, 53–55

**T** (*cont.*)

Transport model, 85, 89  
 Transverse curvature, 76  
 Tundish, 108  
 Turbulence, 84, 88, 89  
 Turbulence model, 19, 28, 86  
 Turbulence modelling, 48  
 Turbulence Reynolds number, 62, 66, 85, 93  
 Turbulent, 19–25, 27–29, 91–93, 96–99, 102–104  
 Turbulent diffusivity, 50, 51  
 Turbulent heat flux, 34, 74, 75  
 Turbulence kinetic energy, 24, 81, 83, 84, 86, 110, 113  
 Turbulent normal stresses, 47  
 Turbulent Prandtl number, 28, 35, 50, 51, 55, 64, 75, 101, 113–115  
 Turbulent scalar fluxes, 47  
 Turbulent Schmidt number, 50, 51  
 Turbulent shear stresses, 47  
 Turbulent spots, 31, 38  
 Turbulent-mixing, 19  
 Two equation models, 50, 56, 57

**U**

Unsteadiness, 19  
 Unsteady convection, 102

**V**

v2f model, 70–72, 75, 78  
 v2f model constants, 71  
 van Driest damping function, 96, 101  
 Velocity fluctuations, 32  
 Ventilation, 105, 112, 115  
 Viscosity, 1, 6  
 Viscous dissipation, 12  
 Viscous sublayer, 25, 65, 70  
 Vortex shedding, 17  
 Vorticity, 6, 19, 20

**W**

Wake, 16, 17, 35, 37  
 Wall blocking effects, 71  
 Wall bounded flows, 22  
 Wall bounded turbulence, 23  
 Wall conduction temperature, 27  
 Wall co-ordinates, 103  
 Wall function approach, 106, 114  
 Wall functions, 62–65, 77, 85  
 Wall models for LES, 99, 104  
 Wall roughness, 114  
 Wall shear stress, 26

**Z**

Zero equation models, 50, 56, 57
