

Applied Econometrics Association Series

General Editors: **Jean H. P. Paelinck**, Emeritus Professor, Erasmus University, Rotterdam, and **Henri Serbat**, Chamber of Commerce, Paris

The vital importance of econometrics for understanding economic phenomena is increasingly recognised in every field of economics.

The discipline is based on 'scientific processes which aim to identify, explain and forecast economic phenomena using formalised tools to produce, measure, structure and model the information' (Gerard Duru and Henri Serbat, 1991).

The Applied Econometrics Association, established in 1974, seeks to develop the use of econometric tools by producing regular updates on the state of the art and the progress made in each specific field, and so to further the transformation of unconnected facts into pertinent information for the use in analysis and decision-making.

The series was conceived to form a set of working references for advanced students and researchers in each specific field, as well as a guide to development across the discipline more broadly.

This exchange of knowledge will be continued permanently by the opening of a debate-site on the Internet [<http://www.lyon1.fr/aea>].

Titles include:

Françoise Bourdon and Jean Bourdon (*editors*)
WAGE ECONOMETRICS AND MODELLING

Fabrizio Carlevaro and Jean-Baptiste Lesourt (*editors*)
MEASURING AND ACCOUNTING ENVIRONMENTAL NUISANCES
AND SERVICES
