Eugenio Caperchione

University of Modena and Reggio Emilia

Modena, Italy

Isabel Brusca

University of Zaragoza

Zaragoza, Spain

Francesca Manes-Rossi

University of Naples Federico II

Napoli, Italy

This series brings together cutting edge research in public administration on the new budgeting and accounting methodologies and their impact across the public sector, from central and local government to public health care and education. It considers the need for better quality accounting information for decision-making, planning and control in the public sector; the development of the IPSAS (International Public Sector Accounting Standards) and the EPSAS (European Public Sector Accounting Standards), including their merits and role in accounting harmonisation; accounting information's role in governments' financial sustainability and crisis confrontation; the contribution of sophisticated ICT systems to public sector financial, cost and management accounting deployment; and the relationship between robust accounting information and performance measurement. New trends in public sector reporting and auditing are covered as well. The series fills a significant gap in the market in which works on public sector accounting and financial management are sparse, while research in the area is experiencing unprecedented growth.
